

CROSS-CONTAMINATION ENDS HERE.

OilSafe's Quick Connects offer a flexible, durable and safe hose interface for use with lubrication management equipment. Manufactured from anodized aluminum, then color-coded, these connects are specially designed to eliminate cross-contamination once and for all. They are available in 10 familiar OilSafe colors or silver to easily identify fluid contents and set the bar with an error-proof/exclusive fit; only two terminals of the same color can fully connect making cross-contamination impossible. OilSafe's Quick Connects keep your machinery and fluids lasting longer while maintaining a safe work environment with precise and secure connections that eliminate leaks, spills and waste.

QUICK CONNECTS

Smooth Performance

These unique Quick Connects maintain purity across your lubricant storage and distribution processes. The color-coded, anodized aluminum fittings eliminate cross-contamination. They are easy to use, nearly impossible to confuse or cross-connect and integrate with a wide range of lubrication management systems and equipment.

Standard for Safety

These zero-leak, precise and secure hose terminals will increase safety and efficiency by eliminating spills and wastes throughout your facility.

Simplicity, Flexibility, Reliability

OilSafe's Quick Connects come in 10 OilSafe colors* or silver that make it easy to identify your equipments fluid contents. Each color-coded male/female pair is designed to only fit terminals of a matching color. A silver terminal is available as a universal fit for all 10 colors — permitting zero-fuss connections for special use cases. These Quick Connects are versatile and the only aluminum, flat-face quick connects on the market.

They are available as an upgrade option on most OilSafe systems, including:

- Advanced Bulk Systems
- Lubrication Work Centers
- Transfer Skids
- 65 Gallon Advanced Fluid Cart
- Tote Skids
- 55 Gallon Drum Work Stations
- Filter Carts

Upgrade kits are also available for purchase to upgrade existing OilSafe systems and reservoirs noted above, as well as filter carts and storage systems from other manufacturers.

Call for upgrade kit part numbers.

Available sizes - 1/2" and 3/4" male and female halves
